setInterval

The **setInterval()** method calls a function or evaluates an expression at specified intervals (in milliseconds).

It will continue calling the function until **clearInterval()** is called or the window is closed.

For example:

```js
function myAlert() {
    alert("Hi");
}
setInterval(myAlert, 3000);
```

Try it Yourself

This will call the myAlert function every 3 seconds (1000 ms = 1 second).

⚠️   Write the **name** of the function without parentheses when passing it into the **setInterval** method.
