The HTML File

Add the basic HTML structure to the text editor with "This is a line of text" in the body section.

```
<html>                                                    HTML
    <head>
    </head>
    <body>
        This is a line of text.
    </body>
</html>
```
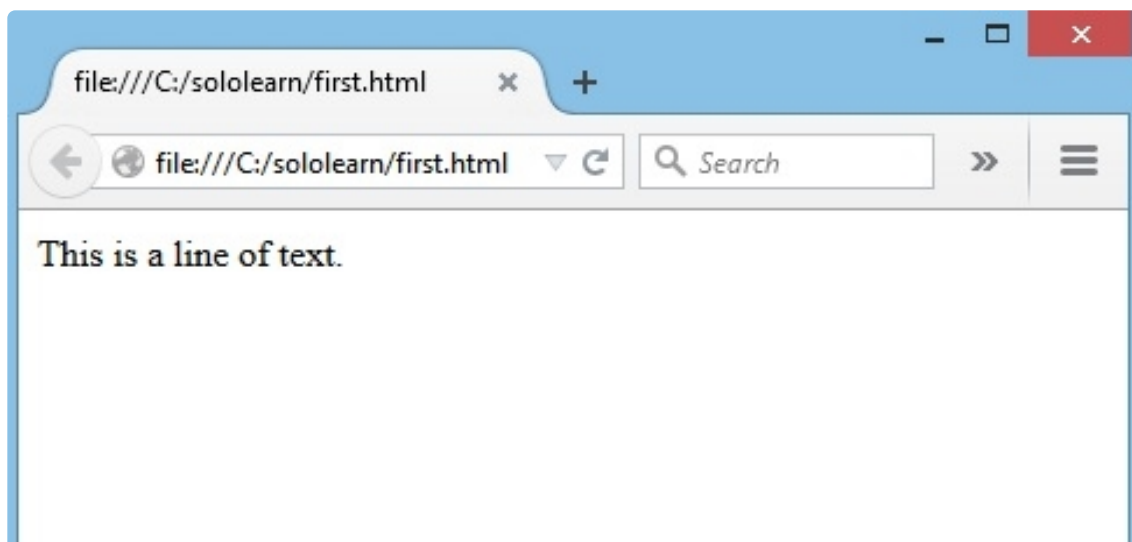

Try it Yourself

In our example, the file is saved as **first.html**

When the file is opened, the following result is displayed in the web browser:

file:///C:/sololearn/first.html

file:///C:/sololearn/first.html

This is a line of text.
